

Neonorm™ Foal

THE PROBLEM

Dehydration poses a significant threat to the health of foals and significantly increases the expenses and labor required to care for the animals. Current products cannot help foals retain fluids quickly enough to avoid severe dehydration.

THE SOLUTION

Neonorm Foal helps to proactively retain fluid in foals helping the animals avoid debilitating, dangerous levels of dehydration. Foals that can avoid severe dehydration are better equipped to fight the challenging events of early life.

(Neonorm Foal is NOT an antibiotic nor an electrolyte.)

A NATURAL PRODUCT THAT IS EASY TO ADMINISTER

Neonorm Foal is a natural product that contains a standardized botanical extract derived from the Croton lechleri tree, which is sustainably harvested. The product acts locally in the gut and is minimally absorbed systemically.

Neonorm Foal is a mint-flavored paste designed to be given orally to foals once every 12 hours, as needed, for up to three days.

IT'S TIME TO RETHINK THE MANAGEMENT OF FLUID RETENTION IN FOALS

Remember, it is dehydration (fluid loss from the circulatory system of the animal into the lumen of the gut) that places foals at risk. Foals are particularly at risk because of their high body water content and surface-to-volume ratio.

DOSAGE

10 mL of Neonorm Foal, 2 to 3 times per day, for up to 3 days. Between 2 to 3 syringes for a full regimen. Compatible with electrolytes and other standards of care.

HOW SUPPLIED

30 - mL Syringe
